Global Stroke Guidelines and Action Plan: A Road Map for Quality Stroke Care

COMMUNITY REINTEGRATION AND LONG TERM RECOVERY

Authors: Lindsay MP, Norrving B, Furie KL, Donnan G, Langhorne P, Davis S
On Behalf of the Global Stroke Quality and Guidelines Advisory Committee,
the Global Stroke Guidelines Working Group,
and the Global Stroke Quality Working Group.
PURPOSE:
The WSO Roadmap to Delivering Quality Stroke Care is an implementation resource to accompany the WSO Global Stroke Services Guideline and Action Plan. This roadmap provides the framework for the implementation, monitoring and evaluation of stroke services globally.

It provides standardization and consistency for the selection of evidence-based recommendations, approaches to implementations in clinical practice, and the calculation of performance measures to create an environment of continuous quality improvement.

TARGET AUDIENCE:
The roadmap is intended to guide local healthcare officials and stroke care clinical groups in establishing stroke systems of care and implementing as many of the defined components as possible throughout the stroke continuum of care. The focus of the roadmap is on the processes of care and impacts on patient outcomes. It is recognized that not all regions will be able to provide all elements of quality stroke care; therefore, the recommendations and performance indicators take into account what should be possible within three levels of service access.

The roadmap is organized along the continuum of care starting at the onset of a stroke event through the acute phase (emergency department and inpatient care), stroke rehabilitation, prevention of recurrent stroke and concludes with community reintegration and long term recovery.

Each section represents a part of the continuum and enables users to review and assess the structural elements and services available for stroke care: core evidence-based best practice recommendations related to processes of care that should be operational; and, a list of key quality indicators to monitor levels of care provided and impact on patient and economic outcomes.

HOW TO USE:
Users of this Roadmap should:
1. Review the sections relevant to their phase of stroke services;
2. Complete an assessment of current services and resources, current recommendations in place, and current data collection methods and access; then
3. Develop an implementation plan to ensure that these core elements are optimized and additional elements added to improve the stroke services they provide.

IMPLEMENTATION:
1. Hands-on hardcopy resource
2. Electronic interactive app/resource where users can enter what elements they have available from a master check list and the program identifies current level, recommendations and performance measures.
COMMUNITY REINTEGRATION AND LONG TERM RECOVERY

This section focuses on stroke survivors in the subacute phase of care as they leave inpatient care (acute and/or rehabilitation) and return to the community, either back to their place of residence before their stroke, or to a different location to meet increased care and support needs resulting from their stroke. The goals of community reintegration are to promote the person’s return to an acceptable lifestyle, participating in both social and domestic activities, and regain as much independence in functioning and a increase quality of life. Successful reintegration could significantly improve outcomes for stroke survivors, and should be goal-oriented.

Community reintegration and stroke management services and activities start during discharge planning from acute care, and is an ongoing set of care activities lasting years following a stroke. Community reintegration ideally involves healthcare providers with expertise in stroke recovery, social and family support, rehabilitation, leisure activities, quality of life. It takes place across many settings including community-based rehabilitation programs, day programs, leisure programs, educational environments, work places, and in the home, based on resource and facility availability.

Health Service Capacity for Stroke Care Checklists

Please complete the following information to clearly identify the stroke services you are developing or assessing.

<table>
<thead>
<tr>
<th>REGION:</th>
<th>ORGANIZATION COMPLETING CHECKLIST:</th>
<th>PRIMARY CONTACT PERSON:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>SERVICE SCOPE:</th>
<th>GOALS OF THIS ASSESSMENT/COMMENTS:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provincial/State/National Assessment</td>
<td>To be completed by local group</td>
</tr>
<tr>
<td>Regional/Local assessment</td>
<td></td>
</tr>
<tr>
<td>Large urban hospital with advanced stroke services (comprehensive stroke services)</td>
<td></td>
</tr>
<tr>
<td>Community hospitals with access to some stroke services</td>
<td></td>
</tr>
<tr>
<td>Community with health clinic as only health services available</td>
<td></td>
</tr>
<tr>
<td>Rural community with a visiting health worker</td>
<td></td>
</tr>
</tbody>
</table>
## A. Stroke Services and Resource Availability

**Please review each of these lists and tick all services and resources that you currently have in place and available for providing stroke care. Once completed, review your responses to determine which category of stroke services you most closely fit into.**

<table>
<thead>
<tr>
<th>Minimum Healthcare Services</th>
<th>Essential Stroke Services</th>
<th>Advanced Stroke Services</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Care provided in local communities without coordination across defined geographic regions</td>
<td>- Access to nurses and nursing assessment with stroke training</td>
<td>- Access to community programs for recovery after stroke</td>
</tr>
<tr>
<td>- Very limited access to physicians</td>
<td>- Primary care settings</td>
<td>- Inpatient stroke rehabilitation beds</td>
</tr>
<tr>
<td>- Provide assessment skill development</td>
<td>- Advanced practice nurses</td>
<td>- Early supported discharge programs</td>
</tr>
<tr>
<td>- Provide training in basic stroke risk factor assessment: blood pressure, atrial fibrillation (pulse check), exercise, alcohol, diet (with respect to circumstances)</td>
<td>- Nurse practitioner</td>
<td>- Home care services for stroke patients</td>
</tr>
<tr>
<td>- Basic skills in risk factor management, medications, lifestyle management</td>
<td>- Ability to reaccess to physicians with stroke expertise (although may not be stroke specialists)</td>
<td>- Organized outpatient stroke rehabilitation services</td>
</tr>
<tr>
<td>- Training in basic rehabilitation techniques, mobility and positioning that can be passed on to family</td>
<td>- General/Family/Primary care physicians</td>
<td>- Local/private community stroke rehabilitation programs</td>
</tr>
<tr>
<td>- Basic training in swallow screens and dysphagia management; and in temperature management</td>
<td>- Neurologist</td>
<td>- Patient and family support groups</td>
</tr>
<tr>
<td>- Variable access to healthcare workers (nurses or lay workers)</td>
<td>- Neurosurgeon</td>
<td>- Stroke prevention clinics</td>
</tr>
<tr>
<td>- Training in basic stroke risk factor assessment: blood pressure, atrial fibrillation (pulse check), exercise, alcohol, diet (with respect to circumstances)</td>
<td>- Internists</td>
<td>- Vocational rehabilitation</td>
</tr>
<tr>
<td>- Training in basic rehabilitation techniques, mobility and positioning that can be passed on to family</td>
<td>- Cardiologist</td>
<td></td>
</tr>
<tr>
<td>- Basic training in swallow screens and dysphagia management; and in temperature management</td>
<td>- Geriatrician</td>
<td></td>
</tr>
<tr>
<td>- No access to diagnostic services or hospital care</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Limited access to the most basic lifestyle preventative advice</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Access to internet</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Access to mobile stroke education (such as WSA)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Access to mobile tools such as Stroke Riskometer</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**COMMUNITY REINTEGRATION AND LONG TERM RECOVERY**

A ROAD MAP FOR QUALITY STROKE CARE

- **Minimal Stroke Services**
  - Stroke rehabilitation registry
  - Stroke prevention registry
  - Stroke prevention database
  - Stroke rehabilitation database

- **Essential Stroke Services**
  - Stroke rehabilitation database (local or regional)
  - Stroke rehabilitation registry
  - Stroke prevention database
  - Stroke prevention registry

- **Advanced Stroke Services**
  - Advanced stroke services rationalized to a smaller number of centres
  - Stroke pathways that define movement of stroke patients across region to higher and lower levels of services as required
  - Coordinated referral system
  - Provide telestroke consultations to smaller and more rural centres
  - Ambulance bypass agreements in place
  - Repatriation agreements in place to transfer patients back to home communities
  - Printed stroke patient educational materials
  - Stroke training programs for all levels of healthcare providers
  - Data collection strategy and mechanisms
    - Acute inpatient stroke registry
    - Acute inpatient stroke database (local or regional)
    - Stroke prevention registry
    - Stroke prevention database
    - SToke rehabilitation registry
    - Stroke rehabilitation database (local or regional)
## B. Core Stroke Care Recommendations

For each best practice recommendation, indicate with a tick whether the described practice is in place as a routine part of care; in development for implementation; not implemented, meaning the service/resource may be available but it is not currently part of stroke care within your services; or, the service/resource/equipment is not available within your facilities, therefore not possible to implement.

<table>
<thead>
<tr>
<th>Health System and Stroke Recognition Core Evidence-Based Recommendations</th>
<th>Applicable Level of Health Services Capacity for Stroke Care</th>
<th>Supporting Evidence</th>
<th>Self Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum</td>
<td>Essential</td>
<td>Advanced</td>
<td></td>
</tr>
</tbody>
</table>

1. All patients with stroke should be screened for depressive symptoms (ideally using a validated tool).
   - Evidence level: B
   - Positive: In place
   - In development
   - Not implemented
   - Not available

2. Patients diagnosed with a depressive disorder following formal assessment should be considered for therapeutic interventions – medication, counseling or combination.
   - Evidence level: A
   - Positive: In place
   - In development
   - Not implemented
   - Not available

3a. Stroke patients should be screened for changes in cognitive status.
   - Evidence level: C
   - Positive: In place
   - In development
   - Not implemented
   - Not available

3b. Patients with cognitive dysfunction should receive cognitive rehabilitation individualized to their deficits.
   - Evidence level: B
   - Positive: In place
   - In development
   - Not implemented
   - Not available

4. Patients surviving a stroke, as well as their families and informal caregivers, should be approached by the stroke healthcare team to participate in advance care planning.
   - Evidence level: C
   - Positive: In place
   - In development
   - Not implemented
   - Not available

5. Patients, families, and informal caregivers should be provided with information, education, training, emotional support, and community services specific to the transition they are undergoing.
   - Evidence level: A
   - Positive: In place
   - In development
   - Not implemented
   - Not available

6. Patients, families and informal caregivers should participate in goal setting.
   - Evidence level: C
   - Positive: In place
   - In development
   - Not implemented
   - Not available

7. People with stroke living in the community should have regular and ongoing monitoring and follow-up with healthcare providers to assess recovery, prevent deterioration, maximize functional and psychosocial outcomes, and improve quality of life.
   - Evidence level: B
   - Positive: In place
   - In development
   - Not implemented
   - Not available

### C. Key Stroke Quality Indicators

For each quality indicator, please note whether data is being actively and routinely collected; or, data collection processes are in development for the indicator; or, data may be available but it is not currently being collected; or, data for this indicator is not available at all so not able to collect or report it. Please tick the most appropriate box for each indicator.

The Roadmap to implementation of the WSO Global Stroke Guidelines and Action Plan includes several modules that together address the full continuum of stroke care. The following modules are available for you to use as part of stroke service planning, self-assessment and implementation. Each Roadmap module includes the relevant service and resource checklist, applicable stroke best practice recommendations and important key quality indicators. Some modules in the Roadmap include additional elements and expanded information to those in the published WSO Global Stroke Care Guidelines and Action Plan to be of further practical use for all sites.

Users of these tools are encouraged to review all modules of the Roadmap.

The following modules are available as part of the WSO Roadmap for Quality Stroke Care:

- Introduction and Overview
- 1. Stroke System Development
- 2. Prehospital and Emergency Care
- 3. Acute Inpatient Stroke Care
- 4. Secondary Stroke Prevention
- 5. Stroke Rehabilitation
- 6. Community Reintegration and Long Term Recovery

About the World Stroke Organization

OUR VISION: A LIFE FREE OF STROKE.

OUR MISSION:
The World Stroke Organization’s mission is to reduce the global impact of stroke through prevention, treatment and long-term care. We work to reduce the impact of stroke on individuals, their families, and their communities. Our members campaign together to increase awareness of stroke risk and to improve treatment and care. We believe that reducing the global burden of stroke makes the world a healthier place for everyone.

Corporate partners

The World Stroke Campaign has been made possible through the generous financial contribution of its corporate partners.
