

This Post-Stroke Checklist (PSC) has been developed to help healthcare professionals identify post-stroke problems amenable to treatment and/or referral. The PSC is a brief and easy-to-use tool, intended for completion with the patient and the help of a caregiver, if necessary. PSC administration provides a standardised approach for the identification of long-term problems in stroke survivors and facilitates appropriate referral for treatment.

## INSTRUCTIONS FOR USE:

Please ask the patient each numbered question and indicate the answer in the “response” section. In general, if the response is NO, update the patient record and review at next assessment. If the response is YES, follow-up with the appropriate action. Please note that the actions described in this version are for guidance and the ‘If Yes’ and ‘If No’ text boxes (highlighted in yellow) can and should be edited for local implementation.

### 1. SECONDARY PREVENTION

Since your stroke or last assessment, have you received any advice on health related life style changes or medications for preventing another stroke?	<input type="checkbox"/> <b>NO</b> →
